CARTE POSTALE. POSTKARTE.

By Appointment

Puddling. Gold bearing drifts often contain clay which has to be removed before the sand can be washed from the gold. This is done by puddling. The "drift" is shot into the puddler, mixed with water, and agitated by heavy iron-rotated harrows kept in motion by a horse, until the clay is carried off by the overflow and the sand and gold remain behind.

(FOR ADDRESS ONLY.)
